# flexbox

(\*) If there is no height/width of child then it will occupy whole width, If stretch is enable then it will occupy whole height.

(\*) justify content always work on main-axis and align-items works on cross-axis

(\*) by default main-axis is your row.

# Responsive design

→ main-axis (after flex-direction: column)

(\*) it should be usable on all device

(\*) fluid grid : flex box

(\*) responsive media : img , video

(\*) Media queries : final touches
